

2022 Triennial Information

Battery-Electric Locomotives

Arrival:

Entrance to the park will be via the Katy Lane Gate. There will be a “Check-In / Registration” pavilion where volunteers will have your registration packet. The packet *should* include such items as meet badge, parking permit, vendor data sheets, etc. It *should* also have your track assignment if you are bringing a train to the meet. The volunteers working “Check-In / Registration” will try to answer your questions. ***Patience Please!***

Battery / Electric Locomotives:

Electrics are an issue as we have an extremely limited number of charging areas. In order to get the most ENGINES next to where we have power we may have to do some creative track assignments. For instance your main consist may be parked in a yard track while your engine in the evening might be stationed elsewhere to gain access to power. Additionally we may have some tracks where the charging stations will share a track or two with multiple engines. We want it to be a good experience for all our members so let's try and work together to make it happen.

Even if you register early you should make plans to have an alternative charging solution. This may include an extra long heavy duty extension cord, your own battery charger, of course, and lastly, if possible a small portable generator just in case.

Respect your neighbor's area and your neighbors. Train Mountain has a 10:00 pm SOUND curfew regarding generators, party noise, radios, etc.

Stuff:

Just a friendly reminder that if you are bringing personal tools and equipment with you it is an excellent idea to properly mark and identify your “*stuff*”. Our current Lost and Found is overrun with “*stuff*”!
